

# Minutes - meeting week 3

## Location: Drebbelweg Hall B

Date: 28/02

Time: 16:45-17:30

Attendees: Junwoon Yoon, Moanta Liviu, Madaras Marina, Dobin David, Cabo Luis, Savova Alexandra

### Talking Points:

[16:45-16:47] : Opening By Chair

- *This week we should start coding, which marks an important starting point.*

[16:47-16:49] : Check In - How everyone is doing

- *Backlog is mostly fine, we only need to change a couple of things.*

[16:49-16:52] : Announcements

- *Is the project setup for everyone?*
  - *If not, try to do it by the end of this week;*
  - *Check if:*
    - *There is any clash between Gradle & Java;*
    - *If the Java environment variable is set to the correct one;*
    - *See Mattermost for a detailed view of how to fix any problems.*
- *We can also use Maven for our project.*
- *Admin is actually required, so we should change & update the backlog accordingly.*
- *We should change the name of the backlog, because it is named draft at the moment.*
- *Everyone feels that we work well together as a team.*
- *The name of the project is still called 'quizzzz'. It's an easy fix.*
- *We don't need to add any other things that are not told to us by the lecturer.*
- *We should focus on our current deadlines, don't think about the HCI assignment just yet.*

- *After every Tuesday we should make a new agenda for Thursday, in which we include additional tasks;*

[16:52-16:55] : Approval of Agenda - Did everyone read the minutes from the previous meeting?

[16:55-17:05] : Discussion about the Backlog (Inform)

According to the Backlog Feedback:

- *Don't name the backlog 'Backlog', rather the name of our application:*
  - *We name our own application*
    - *We should brainstorm names until Thursday.*
- *Make the stories less repetitive;*
- *Mockups:*
  - *Can use Figma or wireframe.cc for them;*
  - *They are useful, but not of the utmost importance (don't spend too much time on them);*
    - *They can help when developing the front end;*
  - *We will do them for:*
    - *Start page (Marina does it)*
    - *Board view (Aleksandra does it)*
    - *Detailed view (Dave does it)*
  - *We can add colors to them;*
- *Administrator is actually needed:*
  - *Make the stories: 'As an administrator...'*
- *We need to fix user description*

[17:05-17:15] : Questions regarding Spring and JavaFX (Brainstorming)

- *How do we start coding?*
  - *Work with 'Person' & 'Quote';*
  - *Get familiar with what are endpoints and why we need them;*
- *We can make extra issues:*
  - *Ex: create the database, an entity etc.*

[17:15-17:20] : Distribution of Roles (Decision making)

*For the mockups we split the work like this:*

- *Start page (Marina does it)*

- *Board view (Aleksandra does it)*
- *Detailed view (Dave does it)*

*We can split 3 people for frontend 3 for backend each week, and switch each Tuesday:*

- *Frontend covers is actually intricate, although it does not seem like that at first;*
- *It's not always the same 3 people, we all need to work together and collaborate;*

*We will split issues per week:*

- *We need to use issues & milestones*
  - *Can add weights to them, to distribute them equally*
  - *Can put deadlines & labels on them*
  - *Can base them on our backlog*

[17:20-17:25] : Feedback Round - What went well and what can improve next time?

[17:25-17:30] : Question Round

[17:10-17:15] : Closure

*‘Grinding salt with a spoon’*

## ***Summary***

- Set up the project, get familiar with Git (through doing the assignment)
- Do the finishing touches to the Backlog, especially mockups
- Make sure you have all the knowledge to start coding
