

# Agenda - Team 41 & Minutes

## Agenda: Week 6

Location: Drebbelweg, PC Hall 1, Cubicle 9  
Datum: 21/03/2023  
Time: 16:45 – 17:30  
Attendees: Marina Madaras, David Dobin, Junwon Yoon (chair), Luis Cabo Villagomez (minute taker), Liviu Moanta, Aleksandra Savova

**Some important points other than the summary have been highlighted**

## Agenda-items

[16:45 – 16:47]

### Opening by chair

Briefly discussing what progress we have made during last week's meetings.

- Basic implementations
  - Frontend features
  - Frontend & Backend connection
  - Serialization & Deserialization
  - Start screen
  - Web sockets
- We are almost finished with all the basic features.
- Finally decided boards will have a 1 to 1 relation each board title has a board (one invite key per board)
- Problem with web sockets/synchronization. Liviu can try to help. Only remaining feature from basic requirements that is not done

[16:47 – 16:48]

### Check-in – How is everyone doing?

[16:48 – 16:50]

### Announcements

- We're almost done with the basic features, and moved towards some of the advanced features
- We need another team to collaborate with, for the heuristic usability evaluation
- We need to discuss why the get request isn't working, and how to keep the ordering of the ordering of cards when retrieving them from the database.
- Get request fixed by Liviu so, problem fixed.
- Team that we decided to collaborate before is unavailable so another team was found.
- Meet with them Wednesday 16:00 pm for demo evaluation // cancelled

- Other team can't meet up - We are going to show them a screen record/video of the application for the evaluation (NO CODE!!) .

[16:51 – 16:52]                    **Approval of the agenda** - Does anyone have any additions to the agenda?

- All good with the agenda

[16:52 – 17:00]                    **Discussion on urgent issues**

- Make decisions for the issues written on Announcements
- Need to split work for the card details part and the rest of the project, people who worked on frontend need to work on backend and viceversa ( card details is going to be worked on by Marina and Luis )
- We need to create issues for the customization part ( next priority after multiboard )
- Need everyone to work on the project equally ( Split issues more evenly )
- Customization:
  - Have a color overview where you can select your preferred colors for a specific user (color overview)
  - Have a menu inside card details to select color for a specific card.
- Customization mostly backend.
- **Discussion: Should we store information about the user in a local file format or in the database? - Backlog is not clear about this. Functionality should be that when I enter some boards and shut down the app, if I reload it back it should show recent boards - Not finally decided**
- Each server has its own set of boards that will show the user in recent boards.
- We can store information about the user without registration.
- **REMEMBER - Pull with frequency since a lot of changes are made in a couple of days. Always pull before you push!**

[17:00 – 17:10]                    **Showing demo application. What work has everybody done?**

- Showing code to others (if applicable)
- Asking for advice, solving problems (if applicable)
- Managing GitLab repository (committing, merging, solving conflicts) – if necessary
- Questions for teammates/TA  
(Inform)
- Push Changes by tonight, Dave and Ali need to collaborate to format changes. Need to have a working “demo” for showing the other team.
- We are going to show the prototype tomorrow to them.
- **Finish HCI report by FRIDAY**

[17:10 – 17:15]                    **Code Reviews. Receiving feedback**

(discuss)

[17:15 – 17:20]

### **Task Distribution**

(brainstorm/ decision making)

- What needs to be improved? What will we build on?
- Assigning work
- Jun can do a lot of work on customization since its mostly backend.
- Again, split issues better and **ADD MILESTONES** to project
- Dave has already kind of finished the “have an overview of all boards” issue so he can do that

[17:20 – 17:22]

### **Summary action points – Who, what, when?**

- Who is assigned to do which tasks for next week?
- When and where is our next meeting?
  - o Expected: Thursday, 5 PM, Echo, 1<sup>st</sup> floor
- What should we discuss on the next meeting?
- What should be done until the next meeting?
- **We are going to meet earlier on Thursday (Marina, Ali and Luis) to start with HCI report, the rest can join later so we can finish on time at about 16:00.**
- Need to write evaluation on the other team by EVERYONE. ( We are also going to receive feedback from them )
- **Technology usage comparison (If we are using Java FX, Spring boot etc on our code)**

[17:22 – 17:25]

**Feedback round** - What went well and what can be improved next time?

[17:25 – 17:30]

**Question round** - Does anyone have anything to add before the meeting closes? Is everything clear with the task distribution? Any questions left for the TA?

[17:30 – 17:30]

### **Closure**

## **SUMMARY**

- *Do the HCI report with the other team by FRIDAY.*
- *Finish with the basic requirements and multi-board, split the rest of the EPICs accordingly*
- *We are on a good track, Let's keep it going!!*
- *Do the technology points the TA showed us (compare our code to see if we have the points)*
